1. (Amended)   A computer system emulating a television

system comprising:

3   a computer converged with a television;

4   a monitor connected to said computer system; and

5   an alphanumeric keyboard for providing alphanumeric

6   information to said computer system, said computer system being

7   capable of interpreting predetermined alphanumeric key presses on

8   said alphanumeric keyboard as a channel macro for selecting a

9   predetermined network, the combination of said computer, said

10 monitor and said alphanumeric keypad providing a user a visual

11 listing of a most probable network being selected by a user by

12 depicting on said monitor a list of user defined network names

13 which most closely match the text as it is entered by the user.

7.   (Amended)   The computer system converged with said

2   television of claim 1, wherein said channel macro provides the user

3   a best guess of potential networks based on the alphanumeric key

4   presses made by the user and tunes said television to said best

5   guess of potential networks.

8.   (Amended)   In a PC/TV computer system having keyboard for

2   providing alphanumeric characters to said PC/TV computer, a method

3   of selecting a network station comprising the steps of:

4   placing said PC/TV in one of a TV mode and a Computer

5   mode with an active video window;

6   pressing a first alphanumeric key on said keyboard;

7   determining whether said first alphanumeric key is a

8   first character in at least one predetermined network station name;

          displaying said at least one network station name <u>on said</u>

10   <u>monitor</u>; and

11   selecting one network station name; and

12   tuning to said network station.

---

1   13.   (Amended)   In a PC/TV computer system having keyboard for

2   providing alphanumeric characters to said PC/TV computer and a

3   viewing monitor, a method of selecting a channel comprising the

4   steps of:

5   placing said PC/TV in one of a TV mode and a computer

6   mode with an active video window;

7   pressing a first alphanumeric key on said keyboard;

8   determining whether said first alphanumeric key is a

9   first character in at least one predetermined network station name;

10   displaying said at least one network station name <u>on said</u>

11   <u>monitor</u>;

12   selecting one network station name <u>from among said at</u>

13   <u>least one network station name displayed on said monitor</u>; and

14   tuning to a channel associated with said network station.
